

Your seven-day survey log

Record every attempt. Count all the minutes. Judge the result using your own observations.

Use one row per day. Add attempts together; write 0 when nothing happened. Keep the completed sheet private.

Week starting:

My time limit for this week (minutes):

Date	Completed minutes	Unsuccessful minutes	Checking + other minutes	Credited AUD	Pending AUD	Notes No identifying details
TOTALS						Add totals manually.

Review the week

Effective hourly rate = credited AUD / (completed + unsuccessful + other minutes) x 60.

Match rewards to these attempts. When a pending reward arrives, move it to credited in its original row.

Never count it twice. Include survey rewards only; keep referral rewards and unrelated payments separate.

Then decide: continue, change the time limit, or stop. A quiet or unsuccessful week is still useful evidence.
